OBJECTIVE

Detail-oriented computer science student and cybersecurity enthusiast seeking to leverage strong programming skills and academic project experience in a dynamic technology role. Committed to writing efficient code, safeguarding information systems, and solving complex problems.

EXPERIENCE

Cybersecurity Intern

Capregsoft

- Completed a 3-month internship in Cybersecurity at Capregsoft.
- Gained practical exposure to cybersecurity concepts and professional technology work.

EDUCATION

COMSATS University Islamabad, Wah Cantt Campus

Sep 2024 – Jan 2028

Bachelor of Science in Computer Science (Current 5th Semester) – CGPA: 3.00/4.00

Wah Cantt, Pakistan

ACADEMIC PROJECTS

Flight Management System

Java, GUI, Database (SQL)

- Developed a desktop application in Java integrated with an SQL database using custom connectivity drivers.
- Designed distinct Graphical User Interface (GUI) panels with separate secure login functionalities for passengers and administrators.
- Implemented core operational modules enabling administrators to schedule flights and manage real-time ticketing.

Banking System Application

Java, GUI

- Created an interactive front-end banking simulator featuring a cleanly structured Java Graphical User Interface (GUI).
- Programmed simulation logic for core financial transactions including cash deposits, balance checks, and loan processing.
- Utilized advanced Object-Oriented Programming (OOP) concepts to handle user accounts and state management seamlessly.

Client-Server Speed Monitoring System

Java, Socket Programming, Networking

- Engineered a networking application using client-server architecture designed to monitor and regulate vehicle speed limits on motorways.
- Established robust real-time communication between simulated roadside client nodes and a centralized tracking server.
- Programmed threshold-triggered alert logic to instantly flag speeding violations and log telemetry data.

Arduino-Based Drawing Machine

Arduino, Hardware, Trajectory Control

- Built an automated hardware plotter machine controlled via an Arduino microcontroller to accurately replicate digital sketches.
- Programmed motor driver firmware and pathfinding logic to translate drawing coordination into precise physical movements.

TECHNICAL SKILLS

Languages: Java, C++, Python, SQL

Core Fields: Database Management, Socket Programming & Networking, Cybersecurity Fundamentals

Soft Skills: Problem Solving & Logical Thinking, Team Collaboration, Communication, Working Under Pressure

Languages (Spoken): English, Urdu
